

Big Eyes

Guy Respaud

The early Polystat-controller, the smallest controller for general temperature control, has been flagship of the largest Armada of conventional thermostats since 2003 and has left the rest high and dry. The only cure its pursuers could come up with was to introduce larger display windows in order to divert attention from the unique Plug & Play-technology.

That was something the Ministat-Unistat-Tango developers could not take lying down. In 2008, the big eyes of the Compatible Control Thermostats received a display almost as big as the Tango's and only Ingrid Bergmann's eyes are lovelier.

Arousing anxiety in the camp of its pursuers (you get on my nerves, kid) and above all excitement in the camp of its supporters. Shock and delight. Guy Respaud, who has seen it coming for a long time, had already created a memorial for the Plug & Play technology and himself at the first signs of delight. It is full of pleasurable little animals and a beautiful orchid curls around everything with big eyes called Huber except for the Tango. Thank you for the flowers Guy Respaud!
